# YAMAHA STANDARDS & OPTIONS

***V6 Offshore 350s have arrived! With the best power-to-weight ratio of any 350 on the market today, Yamaha's latest engine makes our 34 and 24XO/30XO lighter and faster - with better fuel economy than ever before.***

Yamaha now offers enhanced functionality across all models. The Yamaha Next Generation Digital Boat Control System features Digital Electric Steering Tilt Helm, Multifunction Digital Electronic Control, and CL5™ Multifunction Touchscreen Display. This fully-updated system offers better ergonomics, high-tech ease of use, and a more refined look at the helm.

The Helm Master™ EX option is packed with additional features and offers a more responsive experience at every turn. The Helm Master™ EX Joystick with Multimode Set Point™ and EX Autopilot with Waypoint Deceleration work together seamlessly to offer better control and elevated functionality. Waypoint Deceleration slows your approach to favorite fishing grounds, sandbars, and other marks; then allows you to engage Multimode Set Point™ to maintain position for rigging baits, setting up for watersports, and more.

## **Yamaha Multifunction Digital Electronic Controls and CL5™ Multifunction Touchscreen Display**

Standard on all models

### **Plus Digital Electric Steering Tilt Helm**

Standard on all models except the Regulator 23

### **Electronic Key Switch with Wireless Fob**

Standard on Regulator 37, 41

Optional on Regulator 28, 31, 34, 30XO

New Yamaha Offshore F350 engines on testing day in Edenton.

# OFFSHORE COMMAND CTR & REGULATOR MYHELM™

**Offshore Command Center** features Garmin® Multi-Function Displays with Digital Switching and Monitoring, along with proprietary Regulator MyHelm™ interface to seamlessly and intuitively connect key functions including engines, lighting, livewells, macerator pump, and more – all via touchscreen. Wireless Key Fob allows you to turn on lighting, batteries, and other convenient systems as you approach or disembark with the touch of a button. Critical functions including horn, bilge pump, and nav lights are still fully accessible on the LED push button switch panel, with manual override zones to ensure certainty in any condition.

*Regulator MyHelm™ is standard on Regulator 41, 37 & 30XO*

## LATE & CUSTOM CHANGE FEE

---

Every component of every Regulator we build is engineered to the exact wishes of our customers and the exact specifications intended by our elite manufacturing team. One of the top reasons customers choose Regulator is because we have earned a reputation as the best-riding boat in our class, with a fit and finish that is second-to-none. We ensure this reputation through our promise to provide Quality before Delivery.

We have hundreds of Standard Operating Procedures (SOPs) throughout our manufacturing facility, and these SOPs ensure consistency through in-depth, defined processes that result in a high-quality boat that has an extremely low warranty redemption rate.

Unlike most boat manufacturers, Regulator uses quality-tested, time-honored templates for placement of parts and features. Regulator involves our Chief Naval Architect and manufacturing engineers in every stage of the build process to keep the quality in check at all levels of the manufacturing process and deliver the highest-quality boat in the center console category.

There are multiple work orders that go out every time a boat is released from the sales department to the production department. We are an on-demand parts facility, so when the work orders go out, our logistics team places the order for all parts associated with that boat and coordinates shipping for all those parts. These critical steps help ensure the product that Regulator customers have come to expect, and it is another aspect that separates Regulator from the competition.

When a customer asks for something outside of the process set forth when the order is processed, we are happy to oblige; however, it means that one of our engineers must step in and change the appropriate processes in all locations that are affected. This is true of additions, subtractions, and all changes to the original order – whether the change is for a standard, an option, or a custom option. This is because production control must get involved and change all work orders before they go to the factory floor. If the change involves a template, an engineer must go to the floor at that part of the build process and oversee the new cut or varied install.

In order to account for the expense of the engineer's time, expedited parts, and time associated with changing work orders; Regulator must assess a minimal \$300 fee per change. It does not matter how many boats the customer has owned or what the dealer has negotiated. Thank you for your understanding.
